

NEWS2USE

Packing change

Pressure gauge

Dear Colleagues,

With this News2Use Parker HFDE would like to inform you about the packing change of our 63mm and 100mm Pressure gauges.

The packaging will be stronger to prevent damage to the gauge during transportation. The new package is slightly bigger and the outside color is brown instead of yellow as you can see in the pictures below.

The packing change is effective after production batch 1508 for the partnumbers listed on the right, this means you will receive the new package as of December 2015 depending on remaining stock and running change.

We apologise if this change will cause any inconvenience and trust this notification supports the service towards our customers.

Parker Hannifin
Hydraulic Filter Division Europe
